COMMUNITY TOKEN DOCUMENT

LathosWorld

$LWRLD

Every voice counts. Every dollar matters.

MISSION

LathosWorld is a community token on Flap. The 4% tax is there so sniping costs something, and so liquidity, a small project fund, and a burn can keep the thing alive. I am building this in public. I need a few people who will stay.

NETWORK	BNB Smart Chain (BSC)
LAUNCHPAD	Flap.sh · programmable tax token
CONTRACT	0x3899ebf76c768c156df3073031a4518c5f947777
TAX	4% buy / 4% sell
MAX SUPPLY	1,000,000,000 LWRLD
VERSION	v1.6 · 10 September 2026

1. Read this first

This is a **community token document**, not a corporate prospectus and not a promise of profit. $LWRLD was launched on Flap as a programmable tax token so the LathosWorld community — gamers, stream viewers, shop supporters, and friends — has an on-chain home. Prices can go to zero. Liquidity can be thin. Taxes apply on buys and sells. Never buy more than you can afford to lose.

Always verify the contract address before you buy. Copy-paste scams are common. The only official token address in this paper is the one printed on the cover and repeated below.

2. What LathosWorld is

LathosWorld is a creator-led community built around chill gameplay, Once Human sessions, tech and gear, journals, music, and a shop for survivors. The person behind the brand is a father, gamer, streamer, and independent shop owner who is building in public — with the community, for the community.

The token is not a game studio IPO and it is not a protocol with a hidden yield engine. It is a **programmable community coin** on BNB Smart Chain. Its job is simple:

- Give the community a shared on-chain banner they can hold, trade, and rally around.
- Route a transparent 4% trade tax into liquidity, a small project fund, and a burn.
- Stay honest about what exists today versus what we hope to build next.

That is the whole thesis. Culture first. Documentation second. Hype last.

2.1 From me to you

I mean this. Not as a slogan. Not as a launch-week line. With my whole head, my whole body, and whatever is left of a heart after a long day of work, kids, games, and trying to build something that does not feel cheap.

LathosWorld is a community. That is not marketing. That is the only reason $LWRLD exists. I do not need a stadium. I need a few people who actually believe we can grow something decent in public — slowly, out loud, without lying to each other.

If you are here to snipe and run, you are not who this is for. The 4% tax is there so that kind of visit costs something. If you are here because you want this to still matter next year, you are who I am talking to.

Every dollar this project can steer goes back into $LWRLD. Most of the tax already does that on-chain: 85% into liquidity, 5% burned. The 10% that lands in the project wallet is not pocket money. It is for the thing itself — the streams, the tools, the art, the next feature, the boring bills that keep a community standing. I will not pretend that wallet is locked by magic. I will treat it like it belongs to all of us, and I will show what it paid for.

Every voice counts. Every dollar matters. I cannot make anyone believe that. I can only keep showing up until a few of you decide it is real.

3. Official token facts

Figures below match the Flap listing and on-chain configuration as of 9 September 2026. Market cap, liquidity, holders, and circulating supply change every trade — treat live numbers on Flap / BscScan as source of truth.

Name	LathosWorld
Ticker	LWRLD
Network	BNB Smart Chain (BSC / BNB Chain)
Launchpad	Flap — The Programmable Token Launchpad (flap.sh)
Token type	Flap programmable tax token (address ends in 7777)
Contract (CA)	0x3899ebf76c768c156df3073031a4518c5f947777
Creator / fund wallet	0x859B0D91376A6bBF28B1F12F68E916e59708092F
Quote asset	BNB
Created	8 September 2026, 20:29 (time shown on Flap)
Max supply	1,000,000,000 LWRLD
Buy tax / Sell tax	4% / 4% (as shown on Flap)
Live listing	https://flap.sh/bnb/0x3899ebf76c768c156df3073031a4518c5f947777

Table 1. Canonical token identifiers. Verify the CA character-by-character.

Contract address (copy this exactly)

`0x3899ebf76c768c156df3073031a4518c5f947777`

Flap tax tokens are deployed so the address ends in **7777**. If someone sends you a LWRLD address that does not end in 7777, it is not this token.

4. Tokenomics

4.1 Supply model

Max supply is one billion LWRLD. On Flap, a new token typically starts on a bonding curve. Most of the supply sits in the curve until traders buy it out. As buys happen, circulating supply rises and the curve price moves. When the project reaches Flap's graduation threshold, liquidity is designed to migrate to a DEX pool (commonly PancakeSwap on BNB Chain). Until graduation, the bonding curve *is* the market.

There is no separate team allocation table published at launch the way a venture token would have. This is a Flap community launch: supply is issued through the launchpad mechanics, not a private presale with investor unlocks. If that ever changes, this paper will be revised and the change will be dated.

Bucket	Approx. amount	% of max supply	What it is
Bonding curve (unsold)	~994.995M	~99.50%	Still in the Flap curve until more people buy.
Circulating float	5.005M	~0.50%	Tokens already bought off the curve. Snapshot: 1 holder.
Team / VC / advisors	0	0%	No separate allocation, no vesting table.

Table 2. Supply distribution at the 9 September 2026 Flap snapshot. Circulating supply and holder count change with every trade.

An early buyer took the first tokens off the curve. That is concentration of the *float* (the small amount already circulating), not a hidden claim on the other 99.5%. New buys still come from the curve.

4.2 The 4% tax — where each trade goes

Every buy and every sell on the taxed pool pays a **4%** tax. That 4% is then split on-chain according to the Flap vault configuration visible on the token's Tax Info page:

Bucket	Share of the 4% tax	Share of the full trade	Purpose
Liquidity	85%	3.40%	Goes back into the pool.
Community / project fund	10%	0.40%	Project wallet for building, not a silent payday.
Burn	5%	0.20%	Taken out of supply over time.

Table 3. Tax split as configured on Flap (FUNDS 10% · BURN 5% · LIQUIDITY 85%). Percent-of-trade = 4% × bucket share.

Worked example. Someone buys $100 of LWRLD on the taxed pool:

- $4.00 is taken as tax.
- $3.40 of that tax is routed toward liquidity.
- $0.40 is routed toward the fund recipient wallet.
- $0.20 is routed toward burn.
- The trader receives roughly $96 of LWRLD at the then-current curve or pool price, before any other DEX or wallet fees.

Flap notes that creator/fund fees can accumulate and auto-send to the configured recipient once the balance crosses a small dollar threshold (on the Tax Info page this was described as about $4). The published fund recipient is the creator wallet:

`0x859B0D91376A6bBF28B1F12F68E916e59708092F`

4.3 Why 4% — discourage sniping

The 4% buy and 4% sell tax was chosen on purpose to make sniping and dump-and-run expensive. A bot that buys the open and sells a minute later pays tax twice — about **8% round-trip** before slippage. That is the point: tax the hit-and-run so the book is not only a snack for the first block.

Be precise about what 4% does and does not do. It **raises the cost** of flipping. It does **not** stop someone from buying first. The first wallet on a new Flap curve can still take the cheapest tokens. What the tax does after that is siphon

85% of each taxed trade back into liquidity, so the next honest buy has a slightly deeper pool instead of a hollowed-out chart.

4.4 What the tax is not

The fund slice is small by design: enough to help pay for streams, giveaways, art, hosting, or the next feature — not enough to pretend this is a treasury-backed protocol. The burn is a slow deflationary gesture, not a price guarantee.

The tax is **not** a dividend. Holding LWRLD does not automatically pay you BNB. If a holder-reward vault is added later, that will be a new version of this paper with a new date.

5. How Flap fits in

Flap is a modular EVM token launchpad. Creators can launch non-tax or tax tokens, attach vaults that route fees, and trade from day one inside Flap's interface. Tax tokens on Flap use a deterministic address ending in 7777. You should still verify the CA on BscScan yourself.

Why we launched here: a public tax-info page, and a market the community can enter without a custom Solidity deploy. We would rather use Flap's contracts than ship an unaudited hand-rolled token.

6. Utility — honest version

Today, LWRLD's utility is cultural and operational:

- Membership signal. Holding it is how you say you are in the room.
- Community treasury-lite. The 0.40% fund slice can pay for real community work.
- Future hooks we may add: holder-only stream perks, shop discounts, giveaway weighting, or in-community badges. None of those are live as on-chain entitlements today. Do not buy the token because a discount "might" exist later.
- The LathosWorld shop, YouTube, Discord, and streams exist independently of the token. The token does not buy you equity in the shop.

If we ship a real on-chain use (staking vault, merch code, game-adjacent perk), it will be written into a dated new version of this paper, with a link and a "what changed" note. Until then, treat extra utility as a hope, not a feature.

7. Roadmap

Roadmaps in meme and community coins are usually fiction. This one is a work list. Dates are targets, not contracts.

Phase	Focus	Done when
0 — Launch (now)	Token live on Flap. CA published. Whitepaper posted. Linktree listed on Flap.	Anyone can find the real CA in under 10 seconds.

1 — Room	Grow Discord / X / YouTube. Weekly chill sessions. Pin tax-info and CA everywhere.	Regulars know each other. No silent chat.
2 — Proof	Show the fund wallet in public. Occasional community spends with receipts.	People can see the 0.40% doing something visible.
3 — Graduation	If the curve fills, liquidity migrates to a DEX. Update this paper with the pair address.	BscScan pair is pinned next to the CA.
4 — Craft	Optional: shop perk, holder raffle, or stream integration. Only if it is actually built.	A working link exists, not a teaser image.

Table 4. Community roadmap. Missed dates get an honest update, not a silent rewrite.

8. How to verify and buy

Verification checklist

- Open flap.sh and paste 0x3899ebf76c768c156df3073031a4518c5f947777.
- Confirm the name is LathosWorld and the ticker is LWRLD.
- Confirm taxes read 4% / 4% and the badges read FUNDS 10% · BURN 5% · LIQUIDITY 85%.
- Open the Tax Info page and confirm the fund recipient matches 0x859B0D91376A6bBF28B1F12F68E916e59708092F.
- On BscScan, confirm the same token address. Bookmark it. Ignore DMs that “help you buy.”

Buy only through Flap or a DEX pair that you have verified traces back to this CA. Set slippage high enough to cover the 4% tax plus curve/pool movement, or the swap will fail. If you do not understand that sentence, pause and learn it before clicking buy.

Table 5. Official public links as of 10 September 2026. Kick and Reddit exist but are intentionally not listed here until they are ready. Shop and support links live on Linktree. This paper is only about $LWRLD. It is not a business plan for any other project.

10. Risks — the unglamorous page

Read this even if you skip everything else.

- Total loss. Community tokens regularly go to zero. Liquidity can vanish in feel, even if some LP tax keeps dripping in.
- Early-stage market. At the snapshot used for this paper the token was newly launched, with thin liquidity and few holders. Thin books mean large price swings on small buys and sells.
- Float concentration. An early buyer holds most of the tokens that have left the curve so far. That wallet can move the chart.
- Tax drag. A 4% round-trip cost (buy then sell) is 8% before slippage. That cost is intentional (anti-snipe). Short-term trading is structurally expensive.
- Creator-key risk. The fund recipient is a normal wallet. If that key is lost or phished, the 10% fund slice is at risk. We will say so if a new wallet is rotated in.
- Smart-contract and launchpad risk. We inherit Flap’s token and vault contracts. Bugs, UI changes, or chain congestion are possible.
- No audit of this paper. This document was written for the community. It is not a third-party security audit.
- Regulatory risk. Tokens can be treated differently by different jurisdictions. This paper is not legal advice and is not an offer of securities.
- Impersonation. Scammers will clone the name, the logo, and this paper. The CA is the only source of truth.

11. Disclaimer

Nothing in this document is financial, legal, or tax advice. $LWRLD is a high-risk experimental community token. You can lose all of the value you put in. Past streams and shop sales do not predict token price. Nobody here is soliciting an investment. By buying, holding, or selling LWRLD you accept these risks on your own.

This whitepaper may be updated. The version number and date on the cover tell you which draft you are reading. If a screenshot on Telegram disagrees with BscScan, trust BscScan.

12. Document control

Version	Date	Notes
v1.0	9 September 2026	First public draft.
v1.1	9 September 2026	Linktree listed as official hub on Flap.
v1.2	9 September 2026	Supply snapshot. 4% tax explained as anti-snipe.
v1.3	9 September 2026	Community promise: money back into $LWRLD.
v1.4	9 September 2026	Rewrote the letter in first person.

v1.5	9 September 2026	Proofread. Removed leftover version numbers and sharp transfer-tax claim.
v1.6	10 September 2026	Official links updated. YouTube display name LathosWorld. This paper is only the token.

I will keep showing up. If you stay, we will build the rest together.

— Lathos
